

## MOBILE PORTABLE HEPA PURIFICATION SYSTEMS

HEPAire Products Corporation recently introduced our all-modular portable **HEPA** purification system. This slimline ergonomically designed system features our integrated proven Fan/HEPA module technology with minimum removal of 99.99% efficient at 0.3-micron size particles while providing low noise and superior room air exchange rates.

Our extensive years of knowledge in the controlled environments markets coupled with our understanding of the ever-changing recommended industry challenges have led our group to design and build the next generation of superior pre-engineered all modular design air purification systems for a range of general applications while providing a system design balance of airflow flexibility, ease of equipment placement, and standard solutions for integration of today's industry recommended compliance standards.

## MOBILE PORTABLE HEPA PURIFICATION SYSTEMS

HEPAire Products Corporation all modular mobile **HEPA** purification system features slimline ergonomically designed, fully lockable service access door all constructed from metal/powder coated finish with mobile locking casters for ease of movement and final placement.

The HEPA air delivery incorporates our integrated proven Fan/HEPA module technology with minimum removal of 99.995% efficient at 0.3-micron size particles while providing low noise and superior room air exchange CFM capacity rates with built-in SCR staged control design.

HEPA filtered airflow is delivered to proposed space via top mounted air diffuser panels, with low level air return prefiltered intakes.

### HEPA FILTERED AIR DELIVERY

Our extensive years of knowledge in the controlled environments markets coupled with our understanding of the ever-changing recommended industry challenges have led our group to design and build the next generation of superior pre-engineered all modular design air purification systems for a range of general applications while providing a system design balance of airflow flexibility, ease of equipment placement, and standard solutions for integration of today's industry recommended compliance standards.
